AB - J06047826 Aq. slurry comprising at least 45 wt.% of mineral fibres and
at least 25 wt.% of organic fibres, based on the total wt. of solids
is processed by paper-making method to be formed into a wet mat. The
total content of organic matter is contained in the aq. slurry is
below 55 wt.% of the total wt. of solids. A boron-contg. cpd. in an
amt. of 5-50 wt.% of the organic matters, dissolved in hot water is
coated onto the wet mat and impregnated.
- USE/ADVANTAGE - For ceilings, wallings, floorings, Japanese tatami,
etc. The fibre board is superior in high fire preventing property,
high mechanical strengths, and anti-insect property.
- In an example, a compsn. comprising rock wool (50 wt.%), wood fibres
(40), corn starch (7), paraffin (1.5), polyacrylamide (0.5), aluminium
sulphate (1.0) is dispersed in water to produce 4% aq. slurry. Boric
acid is dissolved in hot water at 90 deg.C to prepare 20 wt.% boric
acid hot aq. soln. The soln. is spray-coated onto the wet mat produced
from the aq. slurry.(Dwg.0/0)
